AETERNO

AETERNO AND RAVAIOLI LEGNAMI

Aeterno follows in the path of Ravaoli Legnami, with its technical offering, development and constant research in interior flooring and realisations. The same paths, a new form. Ravaoli is a leader and reference point in the field of decking and outdoor fixtures.

Aeterno is the new challenge, integrating technology and sustainability.

Ravaoli has gone from strength to strength in nearly 40 years in business, establishing its credibility and conquering its very own space on the market, through its tireless and daily pursuit of new and above all, environmentally-friendly technologies. So much more than just certifications and production steps: a whole new concept that transcends mere attention to the local environment.

A strong bond, which thanks to Aeterno, reaches from the outside in, to the very heart of buildings, homes and interiors we inhabit every day, whether we identify as our own or for sharing.

Aeterno designs interiors, creating new and modern solutions that stand the test of time and are always close to nature. This has inspired the founding idea of a company that is recognised and appreciated on all continents, while remaining firmly rooted in the local area and its history. Synthetic and natural materials express the environments in which we seek refuge, somewhere to feel safe, or simply to be ourselves .

As essential as it is to accompany surrounding landscapes and views, we must also strike the right balance with architectonic studies and the lines surrounding spaces we inhabit and occupy daily, alone or in company.

Living interiors to the full, in the long-run, thanks to products that stand the test of time and are resistant to wear: Aeterno makes all this possible. Yesterday, today and above all, tomorrow. Because we look to the future, every single day.

flooring

PURE

Your ecosustainable choice, without compromises, with all the advantages of technological research.

An **integrated sound absorbing cork layer** and a latest-generation, entirely **PVC Free** natural fibre composite core from renewable resources.

The product is completed by a HD high definition digital print that exalts natural and highly realistic natural patterns, up to 40 sqm without repetitions, and all the warmth of this one-of-a-kind product.

Science and aesthetics, as realistic as nature. Exalting the beauty of our environments.

Plank size: 228x1,830 mm - 6.2 mm thick

PURE

Your responsible and ecosustainable choice

The core of **PURE PVC Free** flooring is mostly made of **bamboo fibre and polypropylene**.

A concrete contribution to the circular economy, as polypropylene includes recycled content and can be reused until the end of its lifecycle. All flooring with polypropylene core is made with renewable resources, like recycled plastic, or materials of organic origin, further reducing environmental impact.

PURE has an integrated sound absorbing cork layer and a latest-generation, entirely **PVC Free** natural fibre composite core from renewable resources.

Why **PVC Free**? Because the chances of PVC reuse can be more limited compared to polypropylene. PVC products can be reused, however they slowly lose their capacity to adapt in the long term, giving rise to potential worries regarding plastic coating and additives

used in the production cycle. PVC is also commonly used in single-use products, like packaging, medical devices and consumer goods, where reuse may not be the primary objective.

Even though PVC can be recycled, the presence of additives and complex recycling processes may limit its recycling efficiency, potentially influencing its overall sustainability and potential for reuse.

PURE is more than an alternative, it is a mindful choice. The certainty of being able to create a healthier and more sustainable living space for all the family, protecting our future and yours.

We reduce the ecological footprint, total quantity of greenhouse gases, mostly carbon dioxide (CO₂), generated by an individual, organisation, event, product or service, over a specific period of time.

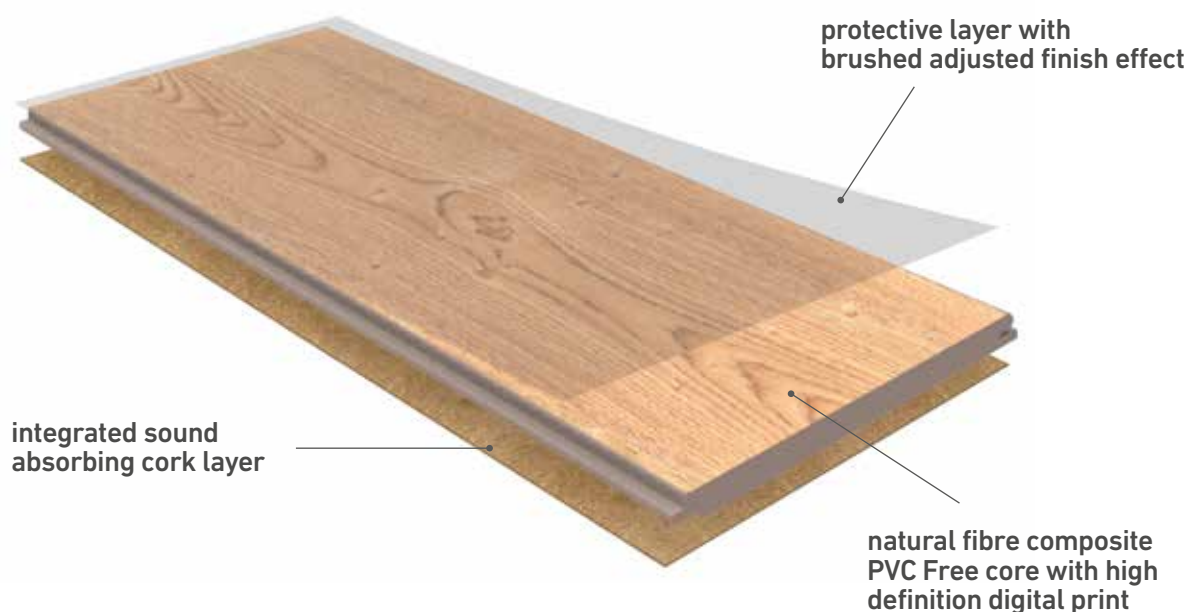

Choose safety

The core of **PURE** contains less volatile organic compounds (VOCs) compared to PVC flooring, due to its chlorine-free composition, improving the salubrity of interiors.

PURE is so much more than just purity, it is also a concept that becomes concrete, as an essential part of healthier interior spaces.

A commitment to the environment and our children's future, breathing and living more comfortable interiors to the full.

NATURE

The **warmth of real wood** in all home interiors, for perfect harmony between interior and exterior in all seasons, all weather, at any time.

An inner SPC core ensures **stability**, a dynamic response in line with expectations, and extraordinary **resistance**. All this with a real wood surface finishing: **each board is a unique piece**, just like a real parquet.

Imagination no longer simulates reality, rather reality itself becomes more concrete.

Plank size: 152x1,900 mm - 6.2 mm thick

NATURE

All the elegance and warmth of real wood

NATURE combines the elegance of **real wood** with the extraordinary performance of the **SPC core**.

The main characteristic of **NATURE** is its combination of authenticity and durability. Thanks to the **real wood** veneer, each element exudes a unique natural appearance, delivering unparalleled warmth and beauty. Each solid wood detail is exalted, for a warm and alluring interior.

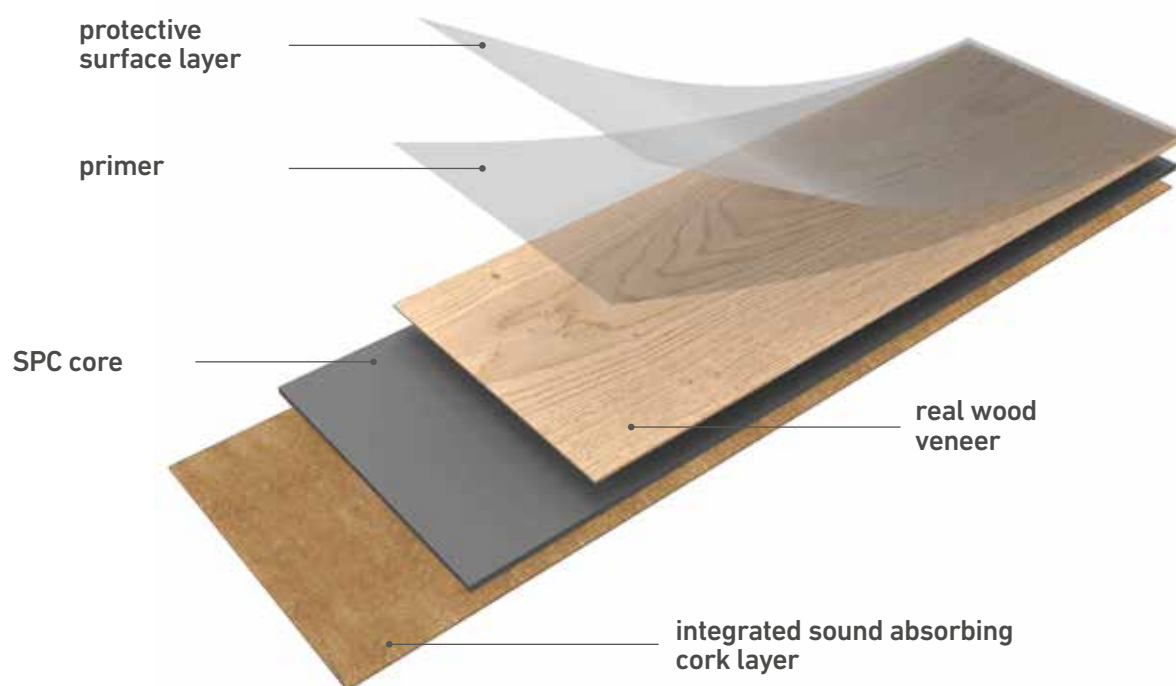

Yet **NATURE** does not stop at aesthetics. The structure with SPC core provides exceptional stability, making these slats resistant to significant temperature variations and 100% waterproof.

Aesthetics and technology

Real wood and its unparalleled beauty. Inimitable, yet there to be admired.

The allure of wood veining leads you on a journey through nature, amid the woods, the magic of trees grown specifically for this purpose. The ambience of all your home interiors transforms, through enhanced elegance and above all, reality.

Just like real wood.

ROCK SPINA

From the floating floor range with **SPC** (Solid Polymer Composite) core, we bring you **ROCK Spina**.

Enriching spaces with new forms and new styles. Its slats, specifically designed for **herringbone installation**, enable levels of personalisation limited by nothing other than your imagination.

Recounting interiors is all about presenting them differently, personalising according to tastes and requirements, without setting yourself any boundaries.

Made with **stone and polymer resin powder**, its core provides resistance and stability. Sound absorbing IXPE layer integrated to the core, for reduced reverberation and impact noise.

ROCK PRO

Resistance and stability are the key characteristics of this product, accompanied by the colours of nature.

Made with **limestone** powder, calcium carbonate to be exact, PVC and stabiliser, the SPC (Solid Polymer Composite) of **ROCK Pro** is suitable for use in both residential and public settings.

Resistant materials that do not fear wear.
The advantages of stone combined with those of PVC.

Minimum cleaning and maintenance requirements and the integrated **sound absorbing layer** reduces both internal and external noises.

ROCK LITE

Can a highly resistant and stable product be light-weight too? The answer is yes, with **ROCK Lite**.

SPC, Solid Polymer Composite, made with **limestone powder**, PVC and stabiliser, leaves room for creativity, with **the HD digital printed** decorative layer and register brushed finishing. A faithful reproduction of nature, with augmented performance thanks to technological research.

Solidity does not compromise lightness, on the contrary it exalts it.

The **IXPE sound absorbing layer** integrated to the core also significantly reduces reverberation and impact noise.

Resistant materials, with all the warmth of parquet, soft to the touch and warm at heart.

ROCK TILE

ROCK Tile, because rock, stone, represents the heart of a tile-sized product, featuring design as an essential element. This characteristic seamlessly ensures easy and rapid installation, including on existing surfaces as part of renovation works.

Stone, rock. Because in addition to PVC and stabiliser, the SPC tile is also made of **calcium carbonate powder**, limestone.

An absolute guarantee of resistance to wear, without losing the sensation of warmth thanks to the **HD digitally printed** decorative layer, coupled with the register brushed finishing, steps that bestow a natural appearance upon the entire **ROCK** line.

ROCK

ROCK is a **floating floor** range with an SPC (Solid Polymer Composite) core made with **stone powder** and polymer resin.

The stone component bestows **resistance, rigidity and stability** upon **ROCK**. Resilient materials come with the benefit of softness and silence underfoot, as well as the warm flooring effect, typical of parquet.

The IXPE **sound absorbing layer** integrated to the core contributes towards reverberation and impact noise reduction.

The HD digital printed decorative layer and register brushed finishing bestows **a real and natural look** upon the entire **ROCK** line.

Low thickness and patented slotting systems ensure **easy and rapid** floor installation, also ideal for existing surfaces and non-invasive renovations.

Thanks to their high performance, **ROCK** floors **are suitable for all interiors**, including humid or high foot traffic ones.

The ROCK range includes different sizes, thicknesses and decorations to satisfy all requirements

ROCK SPINA

WINGS

Unfold the wings of your imagination and surrender to the luxury of a dream come true.

The Wings laminate range is a journey through the very essence of interior flooring, featuring an **ultra smooth** and therefore **bacteriostatic finishing**, with prints that will lead you through the parquets of the world.

Resistant to external agents and above all, **water repellent**. This makes it suitable for all settings, without any real decline in performance, not even with the passing of time.

Easy to assemble, making it ideal for rapid renovation and interventions.

Hypoallergenic and comfortable, the Wings line provides softness and silence underfoot, for a total comfort experience.
